

# TRANSISTOR BIASING METHODS

MODEL - AMP35

This board has been designed with a view to provide practical and experimental knowledge of different Methods for biasing transistors on SINGLE PCB.

## SPECIFICATIONS

1. Built-in Power supply : +15V at 200mA IC Regulated & short circuit protected
2. Power requirement : 230V, 50Hz AC.
3. Transistor BC548B - 3 No. in three different biasing methods.
4. Standard Accessories
  1. User Manual with practical and circuit diagrams.
  2. Connecting patch cords.

In keeping view of SIGMA policy of continuous development and improvement, the Specifications may be changed without prior notice or obligation.
